

Imminent Drilling to Test Substantial Upside

Karoon Gas Australia (KAR) is an Australian based explorer, offering a highly prospective asset portfolio across Australia, Brazil and Peru. KAR has achieved substantial appreciation of its share price over the past few years from its acquisition, work-up and farmout of its Browse Basin interests, plus acquisition of quality acreage in Brazil and Peru. The spotlight will be well and truly focussed on the company this month as it prepares to drill its first exploration well ever on the Poseidon prospect, targeting an estimated 7tcf of P50 prospective resource. KAR shares 3 permits in the Browse basin with JV partner ConocoPhillips (COP) with interests of 40%-49%. The Sedco-703 drilling rig is due on site in January 2009 and will drill one well in each of the three Browse Basin permits. KAR's in-house modelling of a potential 7tcf LNG development indicates a potential unrisks gross NPV of US\$5.0bn (~\$18/sh). Whilst it is important to note that KAR has no proven reserves to date, the drilling program will be testing an estimated 20tcf of unrisks prospective resource within its permits and if successful will provide massive upside. A recent independent report commissioned by KAR determined a mean estimated risks prospective resource across all of KAR's permits of 1,230mboe. Based on these figures the company is one of the most highly leveraged exploration plays with ~8.25boe/share of risks exploration upside. The 200-day drilling program is the culmination of the KAR story and could create a substantial future oil and gas producer. Hence, we view this as a speculative and high risk BUY with a target price of \$4.41/sh.

- **Much anticipated Browse Basin drilling program.** KAR has identified a potential P50 resource of 23.7tcf of gas across its WA-314(49%), WA-315 (49%) and WA-398 (40%) permits from 4 drill-ready targets. Much of this potential will be tested from the drilling program with 3 wells to be drilled. Via its farmout of to ConocoPhillips, KAR's share of the US\$270m program is reduced to a cost of US\$72m. The first well to be drilled will be Poseidon-1, targeting a P50 estimate of 7tcf from the Poseidon prospect which straddles the WA-315 and WA-398 permits. The ~4500m well is expected to take 60-70 days to drill. Note that COP have the right to increase its stake in WA-314 and WA-315 in order to unitise its interests across the board. We currently value the prospect at \$140m (\$0.94/sh) based on \$0.5/mcf in place and 10% POS but highlight that the 7tcf resource is an estimate only and the chance of not encountering commercial hydrocarbons is a risk. However, by drilling a number of large scale prospects KAR have a good chance of unlocking substantial value. We also see funding of any large scale development, further dilution of ownership and timing to first gas as key considerations when looking at potential project valuations.
- **KAR hold a broad portfolio of quality exploration acreage.** KAR's strategy has been to acquire quality exploration acreage in highly prospective basins alongside known/producing fields. In addition to its Browse Basin interests the company holds a 66% stake in AC/P8 in the Bonaparte Basin (Australia), 100% interest in 5 blocks in the Santos Basin (Brazil) and earning up to 60% interest in Block Z38 in the Tumbes Basin (Peru). The forward plan includes seismic acquisition across AC/P8, Brazil and Peru with drilling forecast for 2010/2011.
- **Strong Balance sheet with limited exploration spend.** KAR has \$135m in cash and no debt and commitments for its current drilling program estimated at \$US72m. Hence the company is fully funded to complete this years exploration program across its assets but will need additional cash going forward. Note that KAR's internal model of a 7tcf LNG development requires additional net CAPEX of \$US3.2bn.

OVERVIEW

KAR is an Australian based explorer with interests in four proven oil and gas basins in Australia, Brazil and Peru, targeting large commercial prospects within each area. Since the company was listed on the ASX in June 2004 at \$0.20, KAR has achieved a solid growth in share price through well executed acquisition, work-up and farm-out of highly prospective exploration acreage. The high level of interest in the KAR story stems from the multi-tcf targets located within its Browse Basin acreage and substantial upside should exploration prove positive. In 2006 KAR formed a strategic alliance with ConocoPhillips, farming out a 51% interest in its 2 x Browse Basin blocks (WA-314 and WA-315). In 2007 the JV acquired the adjoining WA-398 permit, split 60% COP, 40% KAR. The Sedco-703 has been contracted for 200-225 days to complete the Browse drilling program, consisting of 1 x well in each of the permits. The rig is expected to commence drilling this month and will continue through to Q3 2009. The first well will be the Poseidon target with potential for 7tcf of gas.

Source: KAR December Review

THE BROWSE BASIN (49% & 40%)

KAR has interest in three permits in the Browse basin, WA-314-P (49%), WA-515-P (49%) and WA-398-P (40%) and has acquired extensive 3D seismic across all three. KAR's permits are on trend to Woodside's nearby Scott Reef (Torosa)/ Brecknock gas fields which has a proven P50 resource of 18tcf and 300mmbbl of condensate. The field is also alongside Inpex's Ichthys field with a P50 resource 12.8tcf and 300mmbbls. KAR has mapped 7 prospects across the permits with the first 3 mature prospects proposed for drilling.

THE BONAPARTE BASIN (66.67%)

KAR acquired its 66% interest in AC/P8 from Woodside in December 2007. The permit is situated in the Timor Sea and lies adjacent to the Laminaria and Corallina fields. The main prospect 'Jania' has potential for 20mmbbls of resource and is located within tie-back distance to the Laminaria/Corallina production facilities. A further 5 additional leads having also been identified. The JV is currently negotiating a proposed work programme for a 5-year extension of the permit.

SANTOS BASIN / BRAZIL (100%)

The Santos basin is located offshore the Santa Catarina region of Brazil which has been subject to multiple discoveries including the giant deep water Tupi field (Petrobras). In April 2008 KAR was awarded five blocks across 850 km² of prospective shallow water acreage on trend with existing Caravela/Merluza fields. KAR program includes interpretation of existing 2D data, acquisition of 3D seismic data in 2009 and potential drilling in 2011. 3 main leads have been identified with potential for 100-200mmbbls of oil and/or multi-tcf of prospective resource.

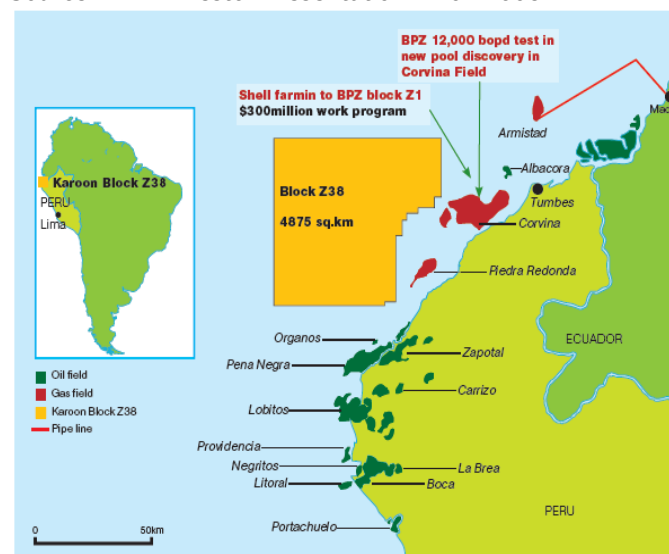

Source: KAR Announcement - Nov 2007

TUMBES BASIN / PERU (20%)

KAR's Tumbes Basin acreage is located in shallow water in close proximity to a number of producing fields, discovered in 1970-80's and close to markets and infrastructure onshore at the border city of Tumbes. The basin has produced over 1 billion bbls of oil to date and is host to a number of new developments including the Camisea LNG project and is in close proximity to the producing Amistad gas field. Two main leads have been identified with potential for 100-200mmbbls of oil and/or multi-tcf of prospective gas resource. KAR is earning up to 60% interest from funding of 2D and 3D seismic, scheduled for 2009, with drilling planned in 2010.
