ASX Announcement

Proteus-1 Exploration Well in WA-398-P Progress Report No 7

At 09:00 WST on the 21st of June Proteus-1ST1 was drilling ahead at 4494m in the 8-1/2" hole section.

Since the last update normally scheduled BOP testing was successfully completed before cement plugs were set in order to stabilize the wellbore. Cement plugs have now been drilled out and Proteus-1ST1 has returned to drilling in the 8-1/2" hole section.

ConocoPhillips is the operator of the jointly held WA-314-P, WA-315-P and WA-398-P Browse Basin permits containing the previously announced Greater Poseidon gas discoveries. Karoon Gas Australia Ltd holds a 40% equity interest in permit WA-315-P and WA-398-P, and a 90% interest in permit WA-314-P.

Proteus-1 is the third well in the exploration program. Proteus-1 is located in permit WA-398-P on a large tilted fault block approximately 14 kilometres south south east of the Poseidon-1 discovery well.

The Transocean Legend semi-submersible rig is drilling the exploration well, which is operated by ConocoPhillips.

Upcoming Well Program

The exploration program, operated by ConocoPhillips, plans to utilize the Transocean Legend semi-submersible rig for the entire campaign and is expected to continue through 2013.

A minimum of six wells will be drilled during the second phase Browse drilling campaign. The principal objective of the exploration program is to better define the size and quality of the hydrocarbon accumulations within the exploration permits which contain the greater Poseidon trend.

Additional well locations for the remainder of the program will be announced as they obtain joint venture approval.

Ongoing progress reports

In addition to complying with its continuous disclosure obligations, Karoon proposes to provide fortnightly progress reports during drilling operations.
